CONNECTING YOUR SUPPLY CHAIN

THE ALLOGA GATEWAY: PROVIDING COMPLETE CONTROL OF SUPPLY CHAIN INFORMATION

The Alloga Gateway is a fully integrated solution that manages your outsourced healthcare supply chain needs. Whether it's stock levels for business analysis, order creation, shipped order reports, or tracking information; all data is there to access whenever it's needed. The Gateway offers you near real time information at any point in time, whether it be in one local or regional distribution centre or across multiple countries. All information with live updates whether in DC or in transit can be accessed.

For Order to Cash clients, the Gateway also provides full order capabilities and order status updates. With the Gateway reporting tools, your inventory and order information is right at your fingertips. Accessible 24 hours a day 365 days a year, the Gateway allows you to remain in control of your supply chain.

- Credit status and returns
- Work in progress reporting
- Forward orders

What is unique about the Alloga Gateway?

Multi-Market connection and visibility:

Alloga sites across Europe are all connected giving you visibility in one system / format and full control across your entire supply chain.

Near real-time information access: $\langle \rangle$

All your data in near real-time to provide you access to updated inventory and order information. All you need to access the information is an internet connection.

Access recent and historical despatch notes:

Despatch notes are archived in the Gateway so electronic copies are always available. It also allows filter searching for quick access to the information you need.

QC release via the Gateway:

In some markets, QA's can remotely release batch or pallet specific stock for sale. This is fully audited and security assessed. Gives immediate remote release and avoiding any communication delays.

Free webinars and training: \bigtriangledown

Alloga provides ongoing support for you and your team. Through online training sessions, we provide targeted training to ensure you truly benefit from this advanced technology.

Order creation via the Gateway: \bigtriangledown

By processing orders directly into our Warehouse Management System (WMS), you can create complex orders without developing costly interfaces. This system includes full tracking system so you can see who created the order and where it is going.

Customised setup and navigation:

The Alloga Gateway can be adapted to individual client preferences, so you can choose your own approach and create a workspace devoted to your own users. We offer a dedicated team for the interface of systems to ensure a smooth transition.

Ensuring optimum stock levels:

The system enables you to set safety stock limits, which will prevent stock levels dropping below your set amount. This is supported by automatic email updates detailing stock holding and expiry dates.

Full order tracking:

You are able to track orders right from request up until proof of delivery. Live tracking updates are also available, enabling you to check the progress of an order at any time.
